

Welcome to the 2014 Clachanburn sale. The last 12 months have been a little calmer than the previous ones! We have settled in to a new kind of normal and Lucy continues to gain strength. Trips to Dunedin hospital, both scheduled and unscheduled are frequent and we have become very familiar with the old children's ward there. The new one is nearly completed and although we would like to imagine we won't get to use it much we have decided to donate 1% of this year's sale income to the Friends of the Children's ward who are fitting it out. We would like to thank PGG Wrightsons for their enthusiasm for this and their agreement to match our ½ % with theirs to make this feasible.

On the farming front this year we saw the result of all our development with around 1800 weaners to the works, about 95% of them before the end of November. This insight into venison production gives us a good grounding into what works with our sires and reaffirms our commitment to Elk/Wapiti as the best way to meet that spring schedule.

We deer fenced the remaining paddocks, but sold some old ones to the dairy farm next door, which has allowed us to finalise the farm succession and put Clachanburn into a stronger position for the future. We have been involved in a little dairy project of our own with a handful of deer. It is in its infancy, but it has been very exciting to be involved in something so completely new. Another dam has appeared near the drive and we have levelled the last border dykes on the farm. Instead of putting K-line in these paddocks we have talked to some of our clients in the area and have installed the elevated static sprinkler systems. We will be watching with interest both the crop yields and the R&M costs as they are hopefully out of reach of the deer!

We have a functioning EID system in the deer shed, although it seems there are now new ways of losing data! We have the first progeny on offer who have been Eye Muscle scanned and the first EBV's for that area, we also have the first progeny from the Maryland hinds that moved to Clachanburn in 2010. They were all AI'd to some of our best historical bulls to give us some way of evaluating them; it has been a blast from the past to see Hurricane and especially King in the sire column again.

There are 13 different sires represented here, as well as a sprinkling of unidentifiable ones. Each animal has its particular strengths and we hope they give buyers the variety to find one that suits their particular requirements.

All the best, we look forward to seeing you on the 15<sup>th</sup> and have a happy and prosperous 2014.

John and Mary Falconer  
Clachanburn Elk

## **Guarantee**

If a bull is proven to be sterile within 12 months of purchase it will be replaced by an animal of similar quality or the purchase price refunded. This guarantee refers specifically to sterility and not to any condition due to accident or illness.

## **Animal Health**

All animals have received injection cydectin, selinised scandia and have had a 20g copper bullet prior to sale

## **TB and Johnes**

Our TB status is currently C10. All sale bulls were Tb movement tested in December and also Johnes tested negative with the paralisa test.

## **Grazing**

Grazing is available for a limited period while making transport arrangements. All care and no responsibility.

## **Transport**

Purchasers to arrange transport at their own cost.

## **Insurance**

Insurance facilities will be available on the day.

## **Bull Inspection**

Prospective buyers are welcome to visit prior to sale day. Please make arrangements with either John Williams or directly with John Falconer. Inspection on the day is from 11.30 pm.

## **Accreditation**

Clachanburn Elk is a Game industry board accredited deer farm

## **Farm Assured Livestock**

We are part of the Alliance Farm Assurance Programme with the deer.

## **Refreshments**

There will be a light luncheon before the sale and a venison BBQ and some beverages after the auction.

## **Conditions of Sale**

1. The sale will be conducted by PGG Wrightson with the conditions of sale as set down by the New Zealand Stock and Stations Agents Association, a copy of which is exhibited in the office on sale day.
2. Each lot becomes the purchaser's property and risk at the fall of the hammer.
3. Warranties and Insurance are covered under separate headings.
4. Terms are strictly cash unless prior arrangements are made with the auctioneers. Accounts not paid within 14 days of sale shall bear interest, at current rate per annum from the date of sale.
5. The sale is conducted exclusive of GST
6. A buyers commission of 6% is payable to non-participating companies and recognised independent agents introducing and accompanying purchasers to the sale providing prior arrangements (No later than 24hrs prior to sale) are made with PGG Wrightson
7. Intending purchasers are required to register with the auctioneers prior to the commencement of the sale.

### **Disclaimer**

All details and descriptions as to stock referred to in this catalogue have been supplied to PGG Wrightson by the vendor and have not been independently verified by PGG Wrightson. PGG Wrightson, its employees and agents make no representations or warranties or acknowledgement of any kind whatsoever in relation to any part of this catalogue including but not limited to accuracy or completeness of details and descriptions of stock and other contents.

Purchasers, advisers and all other persons viewing or dealing with the stock must make their own assessment on the stock and the information in the catalogue.

PGG Wrightson, its employees and agents are not responsible or liable in any way whatsoever, whether in contract, tort (including negligence), or otherwise, to any person for any loss or any damage whatsoever arising directly or indirectly from any information or misrepresentation included or omitted from this catalogue

## **Statistics**

### **%Elk**

The majority of the bulls are run through the Genometer at Invermay to provide the %Elk.

### **Weights**

We weigh our fawns for the first time at weaning, which on Clachanburn is post rut in the first week of May. The weaners are weighed again at 10 Months of age in the first week of September when we start sending the first of weekly loads to the works. By 13 Months, in January we aim to have everything killed except a few stud spikers culled on velvet. All bulls kept are weighed again the following January and then in December to give us an indication of adult weight.

### **Growth rates**

As we fawn mostly on the hill country we are unable to either weigh, or know when individuals are born, therefore we use a nominal birth weight of 15 kg based on an inflated Red Deer figure and a nominal birth date of 1 December to calculate our growth rates. In reality we are probably not 50% through fawning by 1 December so some of these animals will have higher growth rates than those shown.

### **EBV's**

The pioneering work with EBV's for Elk/Wapiti that Clachanburn was a part of is coming along. The accumulation of data from our own stud, other studs coming on board and the involvement of the DPT have meant an increase in accuracy, more categories being developed and a greater rate of change within the statistics. However the linkages are still not established between herds so these are still **in herd** EBV's and can not be compared with other herds or Red Deer EBV's. In addition they were true as of the 5 December 2013. Unlike the growth rates and actual weights they will change as more information is added and linkages are opened up.

We've included again the following the brief guide to our EBV's from Jamie Ward at Invermay who was part of the original team establishing them for Elk/Wapiti:

### **“DEERSelect EBV’s for Elk and Wapiti**

Estimated Breeding Values (EBVs) for Elk and Wapiti are at the same place as they were for red deer around five years ago – EBVs for live weight traits are available within herds, but are not yet comparable across herds,. This means that the breeding values in this catalogue are only from within the Clachanburn Elk herd and can not be compared with any other breeding values.

There is currently not sufficient sire linkage to allow across herd EBV's as with red deer. For red deer this linkage was achieved by the Sire Reference Scheme. Once sufficient linkage between herds is achieved, the EBV system is set up to conduct across-herd analysis.

The other important point is EBV's provide an estimate of **relative** genetic merit. That is, for red deer EBV = 0.0, comes from the average of all deer born in 1995 in the red herds on DEERSelect. Whereas EBV = 0.0 for Clachanburn is the average value for the Clachanburn Elk herd in 1995. Hence the values **can not** be directly compared, for example: the average 12 month red deer weight in 1995 may have been around 95 kg, but for Clachanburn may have been more like 165kg. So +20kg in Clachanburn will be very different to +20 kg in a red herd as the starting point actual average live weight value is very different.

This relativity will also impact the range of EBV's in Clachanburn's analysis, as red deer EBV's have >30 different herds used for the base providing a huge range of values, where Clachanburn only has it's own herd data, with a smaller range.

### **Interpreting EBV's**

If you purchase a sire with an EBV of +10.0 for 12 month weight, you can expect on average that sire's calves to weigh 5 kg more at 12 months of age (i.e.  $\frac{1}{2} \times 10$ ) than a sire with an EBV of 0 (assuming the stags are used over similar groups of hinds). That 5kg will be added to whatever maternal contribution your own females make for the progeny's final 12 month weight.

\*Progeny EBV =  $\frac{1}{2}$  sire EBV +  $\frac{1}{2}$  Dam EBV

\*This is not an actual 12 month weight, but a prediction around the Clachanburn base (average 1995 weight for that EBV)."

Please also note that the rankings this year are for the sex and age group, ie the Rank #2 is the 2<sup>nd</sup> placed bull born in 10. We have included the EBV's for Eye muscle area this year, this was the first generation of animals scanned and accuracy on these is improving slowly.

## **The Future**

We started the year badly losing our best 3 year old bull while collecting semen for the DPT. He was a wonderful Frodo son with stats to rival Megatron's but a much nicer and heavier velvet head. They were able to salvage some semen so we will probably do an AI program with him and some outside bulls in the next couple of years. The AI progeny from 2011 are developing nicely and some should end up in the catalogue next year. One of our other 3 year olds went on to grow a nice 10.9kg 4 year old head which earned him 3<sup>rd</sup> place at the nationals in Invercargill this year and Bolter cut a respectable 17kg.

Several of our other bulls Phoenix and the Hurricane sons Boss and Spitfire (RD300) grew great heads but managed some superficial damage before cutting or during cutting so won't be seen at competitions this year.

Body size and growth rates continue to climb and the bar of what we expect from our deer continues to climb with it. We have especially noticed an increase

in the average weights in the first 13 months that we are achieving. Between the 10 and the 13 month weight is the critical time for killing for that spring schedule, so this is good to see! Frodo and Hurricane seem to have contributed towards this with their sons leaving progeny that are heavier earlier. Megatron has come to the fore dominating our EBV figures, but it will be interesting to see if that changes as younger bulls come on board.

John has been involved in the DPT programme and we supplied semen from 2 of our bulls for the original trial. We followed that up with Megatron and then Boss this year. We're hearing good things about the Megatron progeny and Jamie Ward at Invermay was able to give us the following:

"Thanks to Clachanburn for contributing terminal sires to the Deer Progeny Test (DPT) every year. Clachanburn has contributed the most terminal sires to the DPT with: Hurricane and Phoenix in 2011, Megatron in 2012 and Boss progeny have just hit the ground for 2013.

PU06 052

The DPT kills were later this year so we do not have final results yet, but the Megatron progeny did grow very well this year. With the large contribution Clachanburn has made to the DPT data set they are now well linked for growth traits with the Focus Genetics Wapiti herds. We look forward to being able to provide more information on the 2012 DPT progeny in the New Year and thank Clachanburn for their continued contribution to the Deer Progeny Test. Jamie Ward"

We have continued to Eye Muscle scan the stud weaners with 3 years of data now contributing to the figures, we will continue to build on this and are looking at adding other statistics in time. We foetal aged the in calf hinds this year and will look at that again as well as watching with interest other areas such as Johnes resistance.

Hurricane

Monarch

Clachanburn King

## Sire List

There are a wide variety of sires which we hope will give a good choice to the purchasers.

**Boss:** We have a number of wonderful offspring from Hurricane and this bull is one of the best. He has it all, a big body, great velvet and sensible temperament.

Boss

**Megatron:** A son of Frodo he has raised the bar on weaning and 10 month weights. We looked at selling him in 2011 but we are very glad we didn't. He consistently produces heavy weaners and 10month offspring and eclipses everything else in the EBV's for growth.

Megatron

**OR02 040:** A big bull with a great velvet head but we were never able to identify his parents.

**BK04 129:** A big quiet Hurricane son, not huge in the velvet department, but a great solid body and dominant when mob mated on the hill.

Phoenix

**Phoenix:** An exciting bull who hit over 400kg as a 3yr bull and won the 4yr and Reserve Champion at the National competition in 2009.

**Revolver:** Was the heaviest bull in the body and velvet departments at 2yr and 3yrs. Went from strength to strength as he matured. His wonderful head as a 6 year old won him the EWSNZ competition trophy for that age, and he grew a lovely typical hard antler head.

**007:** An amazing son of Hercules who we had on display here a few years ago. He broke his leg not long after but was sensible enough to have a cast put on and recovered to continue in the stud mob.

**Whopper:** We purchased in 2010 from Tikana he was chosen for his great growth rates and nice velvet head.

**Ronan:** Another purchase from Tikana. A son of Kobe. He came to us in 2008. He had a great heavy body and grew a good heavy head of dark velvet.

**Monarch:** The last crop of naturally mated offspring from this great bull. He was a stocky, bull weighing in around 420kgs. His progeny are often smaller but with his sensible nature and big velvet head.

**Frodo:** Again the last crop of naturally mated offspring from this bull who was bought in from Tikana in 2006. His great growth rates and size are passed down to his progeny.

**Hurricane:** Still producing some great offspring, one of our best all round bulls, sensible and heavy and grew out a great hard antler head. His progeny do well in the EBVs and they tend to be sensible, good doers just like their sire.

**King:** One of the great bulls bred here in the past, a big bull with an incredible hard antler head, he was used in the AI program with the Maryland deer.

See back page for more photos
